

DVO

REPARO

USER GUIDE

WHAT DOES IT DO?

DVO Reparo works like magic to repair specific areas and imperfections in a single frame. It also works for repairing larger damage such as punch holes, film tears and other reconstruction.

Using a brush tool to select the damage, **DVO Reparo** automatically repairs the selected area by comparing it to adjacent frames and applying motion compensation to recreate missing detail.

HOW DO YOU USE IT?

DVO Reparo works on the following platforms:

If you're already a Filmworkz veteran, you can jump right in and use **DVO Reparo**, however if you need a hand getting going, check out these QuickStart Guides:

[PHOENIX QUICKSTART GUIDE](#)

[NUCODA QUICKSTART GUIDE](#)

GETTING STARTED

1. Launch your platform on your workstation.
2. Locate the toolbar, (positioned on the left-hand side of the interface)

3. Scan the toolbar options until you find the **DVO Reparo** tool.

4. Click on it and the control panel under appears:

CONTROL PANEL EXPLAINED
